Likhitha Paipuri
Full Stack .NET Developer
(314) 369-0931 | paipurilikhi@gmail.com | HackerRank | LinkedIn

PROFESSIONAL SUMMARY

- 4+ years of experience as a Full Stack .NET Developer delivering enterprise-grade applications across Financial Services, Agriculture/Agribusiness
- Experience in developing applications using .NET Framework 3.5+, ASP.NET Core, ASP .NET, .NET 8, Web API, Entity Framework (ORM), WPF, Angular & SQL using tools like Visual Studio, TFS, SSMS, IIS, Dev Express, AngularJS, Razor Pages, JavaScript, Ajax, jQuery, TypeScript, CSS, HTML5, Bootstrap, Material Bootstrap, SCSS, JSON & Microsoft Azure through SDLC
- Developed and maintained Web Applications using **ASP.NET MVC architecture,** delivering scalable and high-performance solutions
- Strong expertise in **AngularJS, Angular, TypeScript, Bootstrap, SAAS, RxJS,** for building dynamic, responsive, and feature-rich front-end applications
- Extensive experience with **Microsoft Azure** services, including Blob Storage, Service Bus, Functions, Web Apps, Key Vault, and Azure Monitor, enabling cloud-native and scalable solutions
- Proficient in Microservices, Event-Driven, and Service-Oriented Architectures, implementing solutions with .NET Core, Docker, Azure Kubernetes Service (AKS), and API Gateway
- Expertise in source control and versioning using Git, GitHub, GitLab, Bitbucket, Azure Repos, and TFS to ensure collaborative and efficient development
- Skilled in monitoring and logging, configuring Azure Monitor, Application Insights, and AWS CloudWatch to analyze system performance and troubleshoot issues
- Developed and maintained CI/CD pipelines, automating build, test, and deployment processes using **Azure DevOps**, GitHub Actions, Jenkins, and AWS CodePipeline, ensuring seamless delivery
- Experience working with Microsoft Azure and AWS cloud platforms, building scalable, secure, and high-performance enterprise applications
- Experienced in writing unit and integration tests using **xUnit, NUnit, MSTest**, and front-end testing with **Jasmine, Karma** ensuring high-quality, reliable software
- Expert in asynchronous and parallel programming using async/await and Task Parallel Library (TPL) to optimize performance and resource utilization in high-throughput applications
- Skilled in application security, implementing **OAuth, JWT** to secure enterprise applications
- Proven expertise in deploying .NET Core applications on Docker, Kubernetes, Azure Web Apps, Azure DevOps and IIS, optimizing configurations and security for production environments
- Led and mentored junior developers, providing technical guidance, training, and code review feedback, fostering team growth and performance
- Extensive experience in **Agile methodologies and Test-Driven Development (TDD)**, delivering projects efficiently and adhering to SDLC best practices
- Collaborated with cross-functional teams, translating business requirements into technical solutions and ensuring alignment with organizational goals
- Strong understanding of **.NET memory management and garbage collection**, optimizing object lifecycles and preventing memory leaks for high-performance applications
- Analyzed and resolved application errors and performance bottlenecks using monitoring tools and debugging techniques

Technical Skills

Domains	Financial services, Supply Chain & Logistics ,
Technologies	C#, ASP.NET Core, ASP.NET, ADO.NET, Web API, WPF, Entity Framework, LINQ, Microservices, NUnit, Xunit, MSTests, GIT HUB Co Pilot.
Development Tools	Visual Studio,SSMS , Visual Studio Code

Database	SQL , PL/SQL

Data Visualization Tool	MS Power BI, Chart.js, SSRS
Architecture	MVC, MVVM, n-tier, Event-Driven
Ticketing Tools	Service Now, MS-TFS
Versioning Tool	GIT, Bit Bucket, Team Foundation Server [TFS]
Scripting Languages	JavaScript, jQuery, Angular JS, Angular 18, Jasmine
Framework	.NET Framework 4.8, .NET 8
Reporting Tool	Splunk
Deployment	Microsoft Azure, IIS, CI/CD
Others	HTML5, CSS. XML, JSON, AJAX, Material Bootstrap, Razor
Monitoring Tools	Application Insights, CI/CD monitoring dashboards
Remote Desktop	Microsoft Remote Desktop
Cloud	Microsoft Azure
Scrum	Agile

PROFESSIONAL EXPERIENCE

Feb 2025 – till now

Client: Bank Of America
Full Stack .NET Developer

Responsibilities:

- Engineered scalable, high-performance enterprise web applications using **C#, ASP.NET MVC, and ASP.NET Core**, improving system reliability and response times
- Designed and developed **RESTful APIs** using **ASP.NET Web API / .NET Core**, enabling seamless integration with external and internal systems
- Implemented robust data access layers using **Entity Framework (EF/EF Core)** with **SQL Server**, optimizing query performance and data consistency
- Developed and optimized complex SQL queries, stored procedures, and views, improving data retrieval efficiency for high-volume transactional systems
- Built secure applications by implementing authentication and authorization using ASP.NET Identity, role-based access control (RBAC), and token-based security (JWT)
- Developed responsive and dynamic user interfaces using **Angular, HTML5, CSS3, JavaScript, and jQuery**, enhancing user experience and engagement
- Architected and deployed cloud-based applications on Microsoft Azure, ensuring high availability, scalability, and performance
- Designed and implemented **microservices-based architecture** using **.NET Core**, improving modularity, scalability, and maintainability
- Implemented **audit logging** and **transaction tracking**, ensuring traceability and regulatory compliance
- Implemented **caching strategies** using Azure Cache for Redis and in-memory caching, significantly reducing latency and improving application performance
- Integrated application monitoring and logging using **Azure Application Insights**, enabling proactive issue detection and performance tuning
- Implemented server-side and client-side validation using **ASP.NET validation controls, JavaScript, and Angular forms**, ensuring data integrity and improved UX
- Designed and optimized high-performance **SQL queries** and **stored procedures** for handling large-scale financial datasets
- Designed and implemented **serverless architectures using AWS Lambda and API Gateway**, enabling scalable and

cost-efficient processing of banking transactions

- Configured and managed **secure AWS infrastructure using VPC, IAM roles, and security groups**, ensuring compliance with enterprise security standards
- Worked extensively in **Agile/Scrum environments**, collaborating with cross-functional teams to deliver features in iterative sprints

Employer: Cognizant Technology Solutions **Feb 2021 – Dec 2023**
Full Stack .NET Developer
Client: Viterra Limited

Responsibilities:

- Worked on **the Viterra agricultural commodities** platform, contributing to critical modules such as Credit, Trade, Import/Export, and Commodity Tracking, using **ASP.NET Core, ASP.NET MVC, Angular (2– 18), and SQL Server**
- Implemented layered architecture including Controller, Repository, Business, Model, and View layers to ensure modular, maintainable, and scalable code
- Developed **import/export** processing features, handling shipment tracking, documentation, and compliance with international trade regulations
- Addressed enhancement and defect stories via **TFS**, ensuring timely delivery of business-critical features
- Configured build jobs and automated deployment workflows to streamline development and release cycles
- Conducted code reviews, technical discussions, and documentation, ensuring adherence to coding standards, best practices, and architectural guidelines
- Reported progress and blockers to Product Owner and Manager, actively participating in Scrum ceremonies including stand-ups, sprint planning, demos, and retrospectives
- Leveraged Azure services, including **Blob Storage, Azure Functions, Service Bus, Web Apps, Key Vault, and Azure Monitor,** for cloud-native and scalable solutions
- Implemented unit and integration tests using **MSTest** and **Jasmine/Karma,** ensuring code reliability and functionality
- Utilized **GIT** and **GitHub Co-**Pilot to accelerate development and maintain code quality
- Participated in **production deployment activities**, including release planning, smoke testing, and post-deployment validation
- Collaborated with cross-functional teams, business stakeholders, and QA teams to gather requirements, implement features, and perform UAT testing
- Troubleshot and resolved production issues promptly, performing **root-cause analysis** and **performance tuning** for backend services
- Maintained detailed documentation for development processes, workflows, and code logic to support team knowledge and project continuity
